

AHMAD YOGA WITDODO

Mobile Software Engineer | Flutter

Bandung, Indonesia · ahmadyoga684@gmail.com · linkedin.com/in/ahmadyogadev · github.com/ahmadyoga · Portfolio

SUMMARY

Mobile-focused Software Engineer with 3+ years of experience building and maintaining production applications, primarily with Flutter. Experienced in delivering features for applications serving thousands of students nationwide and approximately 6,000 employees, with hands-on experience in BLoC, Clean Architecture, REST APIs, real-time systems, and production issue resolution. Comfortable working across backend and web technologies to build end-to-end products.

EXPERIENCE

Ganesha Operation — Mobile Developer | 2025 – Present | Flutter

- Develop and maintain 6 production Flutter applications within a 5-person mobile team, serving thousands of students nationwide and approximately 6,000 employees.
- Implement end-to-end features across presentation, business logic, and data layers using BLoC, Clean Architecture, REST APIs, and dependency injection.
- Build and maintain features including real-time multiplayer gameplay, attendance, reporting, registration, and learning workflows, while evaluating technical approaches and proposing improvements.
- Diagnose and resolve production issues involving race conditions, API contract mismatches, session state, WebSocket reliability, and platform/build compatibility.
- Independently designed and built a real-time event application for Rakernas in an 11-day sprint, implementing WebSocket communication, session persistence, reconnect handling, operator controls, and testing; successfully used during the internal event without reported issues.

Refactory — Junior Software Developer | 2023 – 2025 | Flutter, Kotlin, Laravel, Vue.js, Next.js, .NET

- Developed mobile, frontend, backend, and full-stack solutions across multiple client projects, adapting to different existing codebases and technology stacks.
- Built mobile features and REST API integrations with Flutter and Kotlin, while contributing to backend services using Laravel, .NET, and CodeIgniter.
- Selected projects: AladinMall (Kotlin mobile development), SEV-2 (GraphQL, XMPP, mobile app revamp), and HRIS MyTok (Flutter + Laravel).

PERSONAL PROJECTS

IKGO — Educational Korean Learning Game | Flutter · Supabase · Next.js · PostgreSQL

- Built an end-to-end Korean language learning game with multiplayer gameplay, vocabulary quizzes, learning modules, progress tracking, and rewards.
- Implemented synchronized gameplay using Supabase Realtime, covering board movement, property mechanics, quizzes, turn management, and game state.
- Developed a CMS for vocabulary, quizzes, learning content, and game configuration, integrating KRDICT and AI-assisted content generation.
- Prepared the Android app for Google Play closed testing, including Google Sign-In, account deletion, privacy/ToS, Data Safety preparation, and AAB generation.

DropATrack — Real-time Collaborative Music Room | Next.js · TypeScript · Supabase Realtime · PWA

- Designed and built a custom real-time playback synchronization engine using a host-less elected time-source model, maintaining clients within approximately 1.5 seconds despite clock drift and network latency.
- Implemented anonymous identity and role-based authorization using PostgreSQL Row-Level Security.
- Owned the product end-to-end across database schema, realtime architecture, live chat, synchronized multiplayer mini-games, and responsive PWA UX.

EDUCATION

SMK Negeri 1 Wonosobo — Software Engineering | 2019 – 2022

TECHNICAL SKILLS

Mobile: Flutter, Dart, Kotlin · **Architecture:** BLoC, Clean Architecture, Dependency Injection · **Backend & Data:** REST API, Laravel, Supabase, PostgreSQL, SQL · **Realtime:** WebSocket, Supabase Realtime · **Web:** Next.js, Vue.js, TypeScript, JavaScript · **Tools:** Git, Firebase, Gradle
